

# BONNIE LAKE AREA LAKE MANAGEMENT PLAN

MATANUSKA-SUSITNA BOROUGH  
PLANNING DEPARTMENT

Adopted November 1996

## 1 Introduction

### 1.1 Purpose

Lake management plans are developed for a variety of purposes. Most often lake front property owners request management plans because increased development or the provision of new public access brings about increased lake usage and a corresponding increase in user conflicts. As more people use a lake, conflicts among users may occur, bird nesting sites (especially loons and grebes) may be disturbed, environmental degradation may occur, and the overall quality of the experience may decline. The most often cited complaints are noise generated from watercraft during the evening and night hours and inappropriate use of public access points. A lake management plan seeks to present policies and strategies which attempt to balance the various demands placed upon a lake, solve lake related problems, and protect the public health, safety, and welfare.

The Bonnie Lake Area consists of three lakes, Bonnie Lake, Upper Bonnie Lake and Ravine Lake. Since these three lakes have similar characteristics, are in close proximity to one another and property owners seek similar goals, one lake management plan has been developed for all three lakes.

The Bonnie Lake Area, Lake Management Plan provides management guidelines for:

- o The protection of the residential quality of life at the Bonnie Lake Area; and
- o The continued recreational enjoyment of the Bonnie Lake Area; and
- o The protection of the Bonnie Lake Area's water quality; and
- o The provision of actively managed and maintained access; and
- o The protection and enhancement of fish and wildlife; and
- o The protection of the public health, safety, and welfare.

### 1.2 Approaches to Lake Management

There are two approaches that residents and property owners of the Matanuska-Susitna Borough may use to address lake related issues. One approach is to initiate a petition as authorized by 17.58 of the Borough Code. This ordinance, which was adopted by voter initiation in 1994, allows members of the public to either prohibit all motorized use on a waterbody or to establish quiet hours

(11 p.m. to 8 a.m.), a 100 foot no wake zone from the shoreline, requirement of mufflers on all piston driven engines, and allows special events by permit. Once a petition is filed, a report is drafted by the Planning Department regarding the suitability of the ordinance for the lake in question and public hearings are then held on the matter by the Planning Commission and Assembly. Since this ordinance was adopted by voter initiative, it may not be amended for a period of two years. As of April, 1995 this ordinance is in effect for Wasilla, Cottonwood, Mud, and Finger lakes while all motorized use is prohibited on Cottonwood Creek.

The other approach that may be utilized for managing a lake is a lake management plan. A lake management plan is developed with the input of local property owners and residents. The Borough Planning Department assists the planning effort by collecting background information, developing maps, etc., but it is the property owners and residents who decide policy issues and develop goals and recommendations. The management planning process also allows a more comprehensive approach to addressing lake related concerns. The lake management planning process allows property owners and residents to tailor management guidelines to their particular needs and desires.

### 1.3 Process

Lake management plans are typically initiated by individuals having concerns about a particular lake or who have experienced conflicts between user groups. These individuals request that the Planning Department of the Matanuska-Susitna Borough complete a lake management plan. With the concurrence of the Planning Commission which is vested with planning authority in the Borough, the Department collects background information on the lake and contacts adjacent property owners and users to participate in the planning process.

Meetings are held with adjacent property owners and users to: 1) identify any problems that may exist, 2) develop recommended alternatives, and 3) consider methods of implementing the recommendations. A draft plan is then developed and a public comment period is held to solicit comments on the draft plan. After the public comment period is closed, comments are reviewed and appropriate modifications made. A meeting may be held with adjacent property owners and users to discuss the comments and proposed modifications. Whether or not this meeting is held depends on the comments received; if the comments call for minor changes or none at all, a meeting is not likely to occur. On the other hand, if the comments seek major changes to the draft plan, a meeting is arranged to discuss the comments and proposed modifications.

After the draft plan has been reviewed by the public, a public hearing on the plan is scheduled with the Borough Planning Commission. At the public hearing

anyone may comment on the plan. The Commission considers all oral and written comments received and either recommends to the Assembly adoption of the plan as is or with modifications, or recommends Assembly disapproval of the plan. After Planning Commission action, the plan is scheduled for a public hearing by the Assembly. The Assembly considers all oral and written comments received and either adopts the plan as is or with modifications, or disapproves the plan.

#### 1.4 Ponds, Lakes, and Reservoirs<sup>1</sup>

There are no scientific definitions of the terms **lake**, **pond**, and **reservoir**. In general, waterbodies which have a noticeable flow are termed either rivers or streams. "Ponded waters" have little or no current compared with rivers and streams.

A pond is usually described as a small, shallow body of water, with uniform water temperature from top to bottom. There is little wave action and often, an abundance of aquatic plants. Although local definitions may vary, a pond is generally less than ten acres in area and ten feet in maximum depth.

A lake is usually larger than a pond. It may be quite large and deep, with an abundance of cold water at the bottom. It also may exhibit areas of rocky, wave-impacted shoreline as a result of exposure to prevailing winds. The area of land around the lake which contributes water to the lake is the **watershed**. The watershed may be large or small when compared to the area of the lake. The water may enter the lake from the watershed as streams and rivers, or through the ground as groundwater. The term watershed is used interchangeably with **catchment** or **drainage basin**, although the latter term can imply a larger area containing several watersheds or **sub-basins**. The boundaries of a watershed are defined by ridges and hills that divide or separate water movement into one drainage basin or another. The **lake basin** includes the lake bottom as well as the surrounding slopes.

#### 1.5 Lake Lifespan<sup>2</sup>

Lakes fill in, drain themselves, or just evaporate and disappear. They do not last forever. Although lakes seem permanent in our human time perspective, they are sediment traps, and it is natural for them to fill in gradually with sand, silt, and

---

<sup>1</sup> This section is taken from Diet For A Small Lake, Prepared by the New York State Department of Environmental Conservation and the Federation of Lake Associations, Inc., 1990.

<sup>2</sup> This section is taken from Diet For A Small Lake, Prepared by the New York State Department of Environmental Conservation and the Federation of Lake Associations, Inc., 1990.

organic matter. Natural lake aging or **eutrophication** moves from a nutrient-poor (**oligotrophic**) condition to an intermediate (**mesotrophic**) stage of nutrient availability and biological productivity, and finally to a nutrient-rich or highly productive (**eutrophic**) state. Eutrophication - the process of nutrient enrichment and basin filling - may take thousands of years, but it can be accelerated greatly by disruptions to the watershed. Human activities that increase nutrient and sediment loadings to a lake are termed **cultural eutrophication** and include forest clearing, road building, construction, and wastewater discharges.

Trophic conditions in lakes are relative, not absolute - that is, there is no definitive line between oligotrophic and mesotrophic, or between mesotrophic and eutrophic. However, each trophic state has characteristic conditions. Oligotrophic lakes have a low level of organic productivity, clear water, and low nutrient levels. These lakes often are characterized by deep water and steep basin walls. Water in mesotrophic lakes contains a moderate supply of nutrients and organic production. Eutrophic lakes are characterized by a very high level of nutrients which causes a significant increase in the rate of plant growth. As a result, water clarity is greatly reduced, and oxygen depletion is common during the summer months. Eutrophic lakes tend to be shallow and typically, have elevated water temperatures.

Identification of a lake's trophic status is a useful way to determine its general "health", or biological status, from one year to the next and in comparison with other lakes. If a potential problem is identified in a lake, the trophic status can also be used to evaluate management alternatives.

A few lakes are naturally eutrophic. Many lakes and reservoirs are located in naturally fertile watersheds where the soil is highly erodible. Unless the soil remains undisturbed, these lakes have little chance of being anything but eutrophic. Users of these lakes need to recognize and accept the fact that manmade Areas (such as laws, property, or zoning) may not "correct" the conditions. Residents and visitors should adjust their expectations for the appearance and use of such eutrophic lakes.

## 1.6 General Lake Issues and Concerns

This section describes some of the most common concerns and issues that have been raised by residents and property owners of the Borough. There are three main categories of lake related concerns and issues. One category is water quality related. Activities within the shoreland area can have a direct impact on lake water quality. The shoreland is the land within 500 to 1,000 feet of the normal mean water mark of a lake or pond. The placement of septic Areas in unsuitable soils or too close to the lake or the lack of sanitary facilities at public access points can introduce nutrients and pathogens into the lake. Inadequate soil

erosion control during upland construction can increase the loading sediment to the lake. Removal of vegetation along the shoreline or at unsupervised public access points may increase erosion of the bank and loss of its ability to filter runoff.

Another category of concerns and issues is related to the surface use of the lake. Some uses may conflict with one another such as fishing and water-skiing because it is difficult for both activities to occur at the same time and in the same location. Other uses cause conflicts by the nature of how the use occurs such as becoming a nuisance by creating noise during sleeping hours. Some uses of the surface water may create shoreline erosion and hence, sediment loading at the lake and loss of private property.

The last category of lake issues regards the impact of recreational use on wildlife and wildlife habitat. Unsuccessful nesting or above average mortality may occur during the nesting season if nests are harassed, frequented by watercraft, or swamped by wave action.

#### 1.7 Bonnie Lake Area Issues and Concerns

The Bonnie Lake Area, Lake Management Plan was initiated by a request from property owners in the Bonnie Lake Area. Two meetings were held with residents and property owners. At these meetings concerns and issues were discussed.

The issues identified included:

- 1) Maintaining the existing peacefulness (lack of noise), especially in the evening and early morning hours; and
- 2) Protection of the wildlife and wildlife habitat; and
- 3) Provide a safe place for swimmers; and
- 4) Erosion caused by wakes; and
- 5) Protection of the quiet, recreational character of the lake; and
- 6) Surface uses that create noise, disturb wildlife, or create wakes are the primary concerns of property owners and residents.

It is the desire of the majority of property owners and residents of the Bonnie Lake Area that the quiet, recreational use and character of the lakes be protected. The present state of the lakes may be characterized as quiet, with active loon nests. Property owners are concerned that the lake will be increasingly used by personal watercraft, which they believe create several negative impacts. The negative impacts include: wildlife loss, creation of turbid water conditions, shoreline erosion, noise, and a lower quality of life and experience at the lake. Additionally, the large wakes from jet skiers have damaged the boat ramp used

by property owners at Bonnie Lake to access their property and created unsafe conditions for swimmers.

## 2 Inventory of Existing Conditions

### 2.1 Location

Bonnie Lake is located approximately 2.2 miles north of the Glenn Highway at milepost 83.3 and is part of the greater Chickaloon community (see Figure 1). Bonnie Lake is accessed by Sawmill Road. The Bonnie Lake Area is located completely within the boundaries of the Chickaloon Community Council (see Figure 2).

### 2.2 Land Ownership

There are 30 parcels with shoreline on Bonnie Lake. All but one parcel of the land adjacent to Bonnie Lake is privately owned. Ravine Lake has four privately held parcels on the lake while Upper Bonnie Lake has four privately held lots, two Borough and two Native Corporation lots with shoreline (see Figure 3).

### 2.3 Existing Plans

#### State

The State plan affecting the Bonnie Lake Area is the Susitna Area Plan. The Susitna Area plan, adopted in June, 1985 contains management intent for State and Borough lands for an area of encompassing approximately 15.8 million acres. The Bonnie Lake Area is located within the Glenn Highway-Bonnie Lake management unit. Generally speaking, the plan's overall intent for public lands within the management unit is to provide a mixture of land for settlement, public recreation, habitat protection and personal use timber sales.

#### Borough

Borough plans that address Bonnie Lake in some manner include the Borough-wide Comprehensive Plan, adopted in 1971; the Chickaloon Community Plan, adopted 1991 as amended, in 1995; Matanuska-Susitna Borough Coastal Zone Management Plan, as amended; and the Borough-wide Long Range Transportation and Public Facilities Plans.

The Borough-wide Comprehensive Plan does not make specific recommendations for the Bonnie Lake Area.

The Chickaloon Community Plan contains several recommendations affecting the

Bonnie Lake Area. The plan specifically recommends that the access road be upgraded, the boat ramp at Bonnie Lake reconstructed, the number of campsites at the Bonnie Lake State Recreation area increased and its sanitary facilities upgraded.

Bonnie Lake lies within the Matanuska-Susitna Borough Coastal District (District), as defined within the Matanuska-Susitna Borough Coastal Management Plan, as amended. The Coastal Management Plan seeks to direct the course of local, state, or federal development within the District in a manner that protects the important land and water resources of the District. The adopted policies of the Coastal Management Plan are used to evaluate development proposals vis-a-vis resource values in an effort to ensure that the proposals are consistent with the plan's goals and objectives. Local development includes actions that trigger a Borough subdivision, planning or zoning action. For example, a variance application to build a habitable structure or garage closer than 75 feet from the ordinary high water mark of Bonnie Lake would be reviewed to determine whether or not it is consistent with the Coastal Zone Management Plan. Construction within waterbodies are also reviewed for consistency with the plan. Uncovered floating or pile supported docks which do not extend more than 40 feet beyond the ordinary high water line and do not exceed 400 square feet in size may obtain a general concurrence. Metal drums, however, may not be used as floatation devices.

The Borough Long Range Transportation Plan was adopted in 1987 and is presently being updated. The plan does not identify any new road corridors in the vicinity of Bonnie Lake.

The Borough Public Facilities Plan makes recommendations on a regional basis for the provisions of public services including the development of public facilities necessary to the provision of those services. Services included in the plan include: public safety (fire protection, emergency medical services, and emergency preparedness); library; historical preservation; governmental administration; education; parks, recreation and open space; trails; and utilities. All of these elements affect the Bonnie Lake Area in some way, but the Parks, Recreation, and Open Space; and Trails elements would have the most impacts relative to the concerns of this management plan.

#### 2.4 Existing Regulations - Public

This section describes the principle regulations affecting use and development in the Bonnie Lake Area. This section is **NOT** meant to provide an all encompassing description of all activities and uses that require permits or approvals from local, state, or federal agencies. Prior to undertaking any development activity, individuals should contact the appropriate local, state, and federal agencies and obtain the required permits and approvals.

## Federal

Any work which results in the dredging or placing of structures or fills in tidal (ocean) waters, streams, lakes, or wetlands requires a 404 permit from the U.S. Army Corps of Engineers.

Migratory birds, which include loons and grebes, are protected by the Migratory Bird Treaty Act. The Act, among other things, prohibits the "take" of migratory birds where "take" is defined to mean pursuing, killing, etc., migratory birds. Destruction of nest sites, eggs, or the birds themselves is a violation of the Act.

## State

The Alaska Department of Environmental Conservation (DEC) provides regulations for wastewater disposal. DEC wastewater/septage regulations [18 AAC 72.015(f)] state that no holding tank, septic tank, soil absorption Area, seepage pit, privy, or other waste water collection, treatment, or disposal Area may be within 100 feet, measured horizontally, of the mean annual high water level of a lake, river, stream, spring, slough, or the mean higher high water level of coastal waters.

A state of Alaska recreation site exists at Bonnie Lake. The site includes picnic areas with fire-rings and also includes the 98 surface acres of Bonnie Lake. The Department of Natural Resource, Division of Parks and Outdoor Recreation (DPOR) has management jurisdiction of the surface waters of Bonnie Lake. Present DPOR regulations restrict certain activities on both the land and water. For instance, the use of All-Terrain-Vehicles, the discharge of firearms and destruction of natural resources at the site are all prohibited.

In addition to the U.S. Army Corps of Engineers 404 permit requirements, any activity within streams and certain work within lakes requires a Title 16 permit from the Department of Fish and Game. Activities which result in the construction of a dam which impounds water or places a weir, culvert, or temporarily blocks a stream requires a Title 16 permit. In February, 1994 the Habitat and Restoration Division of Fish and Game issued a one year, general permit allowing the vehicle movement on frozen water surfaces in southcentral Alaska. The permit allows certain motorized vehicles less than 2,000 pounds gross vehicle weight and wheeled vehicles less than 10,000 pounds gross vehicle weight to travel upon frozen water surfaces in southcentral Alaska without a special permit. Finally, the general Alaska Department of Fish and Game fishing regulations apply to Bonnie Lake.

## Borough

Several Borough-wide ordinances address the development and use of land adjacent to Bonnie Lake. The regulations are contained within the Borough's planning (Title 15), subdivision (Title 16), zoning (Title 17), and real property management (Title 23) ordinances. The adopted Coastal Management Plan described earlier, because of its enforceable criteria, also regulates development activities within and near Bonnie Lake.

Title 15 establishes and describes the general functions of the Planning Commission (both planning and zoning functions) and the Board of Adjustment and Appeals. Title 15 also describes the comprehensive plan and purposes. Once adopted, the Bonnie Lake, Lake Management Plan will become an instrument of Borough policy similar to the other plans adopted by the Borough Assembly.

Title 16 provides the subdivision development standards within the Borough and establishes the Platting Board. Two of Title 16's requirements that are of special note to development at Bonnie Lake include a minimum lot size of 40,000 square feet, and a minimum lot width when measured at the lake's water line of one hundred twenty-five feet unless community septage is provided, then the minimum width may be eighty-five feet (see Figure 4).

The Borough has a Borough-wide comprehensive plan which is implemented, in part, through the Borough-wide zoning ordinance. Presently, the Borough undertakes its comprehensive planning on a community by community basis. As most comprehensive plans are implemented through a zoning ordinance, a number of different zoning ordinances exist within the Borough and are identified as Special Use Districts. For example, the cities of Houston, Palmer, and Wasilla all have their own comprehensive plans and all have zoning ordinances unique to their cities. Title 17 contains these various zoning ordinances of the Borough. A list of Title 17's chapters follows.

- 17.01 Acknowledgment of Existing Land Use Regulations.
- 17.03 Public Notification.
- 17.04 Nancy Lake State Recreation Area Special Land Use District.
- 17.08 Hay Flats Recreation Area Special Land Use District.
- 17.15 Palmer Special Land Use District.
- 17.17 Denali State Park Special Land Use District.
- 17.18 Chickaloon Special Land Use District.
- 17.19 Glacier View Special Land Use District.
- 17.29 Flood Damage Prevention.
- 17.36 Residential Planned Unit Development.
- 17.40 Houston Land Use Ordinance.
- 17.45 Wasilla Special Use Land District.

- 17.48 Mobile Home Park Ordinance.
- 17.52 Residential Land Use District.
- 17.55 Setbacks and Screening Easements.
- 17.56 Violations and Enforcement.
- 17.58 Motorized Uses on Lakes and Waterways.
- 17.60 Conditional Uses.
- 17.65 Variances.
- 17.70 Regulation of Alcoholic Beverage Uses.
- 17.80 Nonconforming Structures.
- 17.90 Regulation of Adult Businesses.
- 17.99 Fees.

Zoning regulations that are of special note to development activities at the Bonnie Lake Area include those outlined in the Chickaloon Special Use District, setback requirements and a petition process to limit or eliminate motorized use of lakes and conditional use permits.

The Chickaloon Community Plan, as implemented by the Chickaloon Special Use District, regulates certain land uses in the area. For example, uses requiring a conditional use permit include: group homes, churches and related buildings, utility substations and utility lines, highway maintenance yards, commercial gravel and quarry pits over one acre in size, group camps, natural resource extraction and processing, mobile home parks and uses that cause physical changes to the lot exceeding one acre in size, excluding agricultural uses, as well as, roads and parking lots when used as ancillary uses. Additionally, sanitary landfills, refuse areas, junkyards, salvage yards and automobile wrecking yards are prohibited. The Chickaloon Special Use District also has a minimum lot area of five acres in size.

Presently, all structures must be a minimum of twenty-five feet from a right-of-way and ten feet from all lot lines. In addition, the voters of the Borough approved by initiative, a requirement that all habitable structures and garages must be located at least seventy-five feet from the ordinary high water mark of any waterbody or watercourse (see Figure 4). In 1994, the voters of the Borough also adopted by initiative, an ordinance that allows by petition and subsequent adoption by the Assembly the following restrictions to be placed on lakes and waterbodies: 1) limiting or elimination of motorized use of lakes, 2) establishment of quiet hours, and 3) establishment of a one hundred foot no wake zone from the ordinary high water mark. The Borough also requires that any development which seeks to establish or operate a mobile home park, junkyard, refuse area or landfill, or dispense alcohol must first obtain a conditional use permit.

The Borough received approximately 350,000 acres of land through the Municipal Entitlement Program. The Planning Department of the Borough manages and

# Figure 4

## General Setback Requirements and Lot Size\* Requirements

Ordinary High Water Line  
of Lake (no community septage)

Ordinary High Water Line  
of Water Body or Watercourse

Ordinary High Water Line of  
Lake (community septage available)

\*All lots must be a minimum of 40,000 sq. ft.

disposes of these lands through the policies and procedures described within Title 23. As of December, 1994, the Borough did not own any land within the Bonnie Lake Area.

#### Existing Regulations - Private

No private regulations exist in the Bonnie Lake Area as no subdivision covenants have been recorded. For current information about covenants in the area, the reader is referred to the State of Alaska Recorders Office.

### 2.5 Present Lake Usage

The Bonnie Lake Area is made up of Bonnie Lake, Upper Bonnie Lake and Ravine Lake. Bonnie Lake has a surface area of 99.8 acres and has 2.2 miles of shoreline. Upper Bonnie Lake has 1.9 miles of shoreline and 105 acres of surface area. Ravine Lake is the smallest of the three lakes, with 12 acres of surface area and 0.8 miles of shoreline. Ravine Lake is stocked with Rainbow trout.

The present use of the Bonnie Lake Area may be characterized as being quiet, recreational and residential. The property immediately adjacent to Bonnie Lake is primarily residential, held in private ownership. Land ownership adjacent to Upper Bonnie Lake is also primarily private, however a significant percentage is in Native ownership. The land adjacent to Ravine Lake is primarily owned by the state.

Very few residents live at Bonnie Lake Area throughout the entire year. Lake front property owners and visitors to the Bonnie Lake State Recreation pose the predominant users of the Bonnie Lake Area. They boat, swim, and fish at the lake. The use of personal watercraft (i.e. jet skis and wave runners) are not a regular occurrence at the Bonnie Lake Area. The lakes are shallow and property owners are concerned that the use of personal watercraft and large motors will create erosion of the shoreline, turbidity, loss of wildlife, and noise. Noise is of special concern as the nearby mountains and hills dramatically amplify sound levels and create echos.

Residents have indicated that Upper Bonnie Lakes are infrequently used by visitors for boating and fishing. Ravine Lake is a popular shoreside fishing lake. The public regularly visits the state Recreational Area at Bonnie Lake. The area is reached via the Glenn Highway, turning left onto Sawmill Road at milepost 83.3. Public access to Bonnie Lake is through the state recreation area. There are patent reservations on two private lots, but they have not been developed for public access. Ravine Lake is accessed via state land. There is no platted access to Upper Bonnie Lake. Alaska Department of Fish and Game has brushed a trail along state of Alaska property line, to Matanuska-Susitna Borough land, which is reserved for public recreation.

LAND OWNERSHIP AND PARCEL SIZE			
	UPPER BONNIE LAKE	BONNIE LAKE	RAVINE LAKE
NUMBER OF PARCELS	7	30	4
TOTAL ACREAGE	218.9	114.01*	293.5*
AVERAGE PARCEL SIZE	31.27	3.93	73.38
SMALLEST PARCEL SIZE	10.31	3.16	1.0
LARGEST PARCEL SIZE	52.43	6.44	280 +/-

Note: Sample includes shoreline parcels only.

\* State of Alaska owned parcel is adjacent to both Bonnie and Ravine Lakes, but is included in the total acreage calculation for Ravine Lake only.

LAKE CHARACTERISTICS			
	UPPER BONNIE LAKE	BONNIE LAKE	RAVINE LAKE
SURFACE AREA	105 ACRES	99.8 ACRES	12 ACRES
MAXIMUM DEPTH	35 FEET	35 FEET	25 FEET
MEAN DEPTH	NOT AVAILABLE	NOT AVAILABLE	12 FEET
SHORELINE LENGTH	1.9 MILES	2.2 MILES	0.8 MILES

The present use of the Bonnie Lake Area may be characterized as being quiet, recreational and the property immediately adjacent to the lake is residential in character. A few residents live at the lake throughout the entire year. Lake front property owners are the predominant users of Bonnie Lake. They boat, swim, and fish at the lake. The use of personal watercraft (jet skis) is not a regular occurrence at the Bonnie Lake Area. The lakes are shallow and property owners are concerned that the use of personal watercraft and large motors will create erosion of the shoreline, turbidity, loss of wildlife, and noise. Noise is of special concern, as the nearby mountains and hills dramatically increase sound levels.

Residents have indicated that the Ravine and Upper Bonnie lakes are infrequently used by visitors for boating and fishing. The public regularly visits the state recreational area at Bonnie Lake.

### 3 Goals

Goals describe the future expectations of residents, property owners, and users for a lake. The following goals reflect the aspirations of Bonnie Lake residents, property owners, and users and address their principal concerns: water quality, access, wildlife, quality of experience, and the recreational character of the area. The goals are not shown in priority order as they are interdependent.

#### 3.1 Water Quality

The Bonnie Lake Area is a significant natural resource and it is the desire of property owners, residents, and users of the Bonnie Lake Area to maintain or improve the lake's water quality.

#### 3.2 Recreation and Residential Character

The recreational opportunities offered at the Bonnie Lake Area should be maintained and enhanced but suited to the lake's particular characteristics and should not detract from the quality of experience at the lake.

The Bonnie Lake Area offers a unique setting for recreational use and this quality should be protected and preserved.

Upland development should occur in an appropriate manner to ensure that pollution, noise, or other environmental degradation of the lakes and uplands does not take place.

Uses of the lake should be compatible or enhance the present character of the lakes which is of a low-impact, quiet, recreational character.

#### 3.3 Wildlife

The ability of the Bonnie Lake Area to remain a migratory bird (grebe and mallards) nesting sites should be preserved. Recreational use of the lake should be compatible with wildlife nesting.

#### 3.4 Access

Legal and physical access to the lake should be assured for all members of the public.

Public access should be properly managed and measures should be developed to maintain its safety, cleanliness, sanitary nature, and to ensure that the area remains open to all.

## 4 Management Issues, Alternatives, and Recommendations

The management issues at Bonnie Lake were identified by the lake's property owners and residents. This section describes several methods for alleviating problems and provides preferred recommendations. The alternatives were developed through discussions with property owners and residents, and a review of how other lakes in the Borough are managed and how lakes in other states have been managed.

### 4.1 Wildlife

*Management Issue* The principle wildlife of concern to the Bonnie Lake Area residents and property owners is the retention and protection of loon, grebe and mallard nesting sites. Presently, the lakes have active nests and there is a concern that increased motorized activity on the lake will harm the existing nesting sites. The remainder of this section will discuss alternatives for preserving and protecting the loon, grebe and mallard nests.

Loon nesting sites and successful breeding may occur on lakes having development and recreational use if sufficient habitat is available and the nesting sites are not repeatedly disturbed. Loons will nest on shore although islands offer the optimal nest sites. Nesting periods generally begin in late May through late June, however, if a nest is abandoned a loon pair may attempt a new nest and this second nesting period runs through late July. In order to retain and protect the existing nest site, lake users need to become informed of how recreation and development affects loons, as well as avoid the nest site during the critical nesting/mating/rearing periods. While grebes commonly have the same breeding period as loons, grebe nest sites are much different. Grebes prefer to nest on floating objects, typically vegetation.

Nest sites and breeding may be disturbed in a number of ways. Steady activity that comes near a nest site, whether motorized or non-motorized, may cause the nest to be abandoned. High motorized activity near a nest site may cause chick mortality due to separation from the adult or wakes caused by motorized craft may destroy the nest or wash away the eggs. In addition to damaging a nest, activities occurring too close to a nest will cause loons to leave an active nest thereby allowing predators such as gulls and ravens to eat the unprotected eggs or chicks. Discarded mono-filament line presents another threat to loons and other birds as it may entangle birds and chicks and ultimately kill them through starvation, predation, or by drowning.

*Alternatives* If nothing is done to inform lake users of the sensitivity of loons and grebes to water borne activities and development, active nests will not be found on Bonnie Lake in the future. In order to maintain the presence of loons and grebes, it is necessary that some proactive steps be implemented.

**Recommendations** Most individuals will not disturb a nest site if they are informed of its location and the proper behavior when near it. It is recommended that a number of techniques be employed to provide the public with information about loons and grebes. First, existing nests where regular loon or grebe nests have occurred should be encircled by a number of buoys marked with "Loon (or Grebe) Nesting Site - Do Not Approach" placed at least 150 feet (200 feet preferred) from the nest's boundary. Appendix #1 provides an illustration of a low cost, effective buoy. Loon and grebe alert notices and general information about loons should be posted at a weather-protected signboard at the lake's access point to inform the public about proper "loon or grebe etiquette" (see Appendix #1).

Since the lakes within the Bonnie Lake Area are small and shallow, it is very easy to create wakes and turbid conditions. Wake action may cause bird and water fowl mortality by swamping active nests or by separating parents from chicks. Turbid waters reduce fish stocks. Therefore, it is further recommended that a ten horsepower limit be placed on watercraft using Ravine Lake and an electric motor only limit on Upper Bonnie Lake in order to reduce wakes, turbidity, and shoreline erosion. Jet skis and wave runners (a.k.a. personal watercraft) be prohibited for all three lakes.

#### 4.2 Noise

**Management Issue** The Bonnie Lake Area has a history of low-impact, quiet, recreational use. Residents and property owners of the area wish to maintain these characteristics of the lake. Additionally, the Bonnie Lake Area contains three relatively small and shallow lakes and therefore are not of sufficient size to adequately support recreational use that generates a large number of wakes.

**Alternatives** Four alternatives may be considered for this management issue; namely: 1) do nothing, 2) prohibit all motorized use, 3) limit the size/power of motors that may be used on the lakes, and 4) prohibit jet skis and wave runners (a.k.a. personal watercraft).

The first alternative, "Do Nothing", ignores problems that may be associated with noise. The "Do Nothing" alternative also ignores one of the primary reasons residents and property owners requested that a lake management plan be developed. This alternative is therefore rejected.

The second alternative would prohibit all motorized use of the lake. While this alternative would eliminate noise associated with motors, it would also restrict craft that do not generate noise such as boats with electric motors. A complete ban on motorized use would also eliminate uses that are not associated with the noise problem. The third alternative is a slight modification of the second

alternative where a horsepower limit is placed on watercraft using the lake. It is the recommendation of property owners that Ravine Lake, due to its small size, have a boat horsepower limit of ten horsepower, while Upper Bonnie Lake property owners recommend an electric motor only limit on Upper Bonnie Lake.

A fourth alternative is to prohibit jet skis and wave runners (a.k.a. personal watercraft) for all the lakes as the lakes are small, shallow and therefore not suitable for jet ski use.

***Recommendation*** Residents and property owners of the area initiated the lake management planning process, for among other concerns, to protect the existing quiet, low-impact, recreational use of the Bonnie Lake Area. It is therefore recommended that Ravine Lake be restricted to motors ten horsepower or less, Upper Bonnie Lake have an electric motor only limit, and that jet skis and wave runners be prohibited on all three lakes within the Bonnie Lake Area.

## 5.0 Implementation

Plans may be implemented in a number of ways but are typically implemented through capital improvement programs and subdivision and zoning ordinances. Within the Borough, residents may also petition for motorized use restrictions on lakes and this ordinance may be used to implement a lake management plan. This ordinance was discussed by the Bonnie Lake Area property owners and found not to be needed at this time. Plans may also provide for private implementation through public information campaigns and a list of best management practices that may be used by the public. The problems facing the Bonnie Lake Area at this time do not warrant a special zoning or subdivision ordinance nor do they warrant implementation of the Borough's motorized use of lakes ordinance. Therefore, this plan will utilize a combination of public information and best management practices to implement the plan. The Borough should utilize its citation authority for infractions of the recommended management guidelines of this plan. In addition, a lake management ordinance<sup>3</sup> may be adopted containing a general provisions section that provides limited guidelines, e.g. wildlife protection, quiet hours, no-wake zones, and bans on overnight camping. The Bonnie Lake Area residents and property owners should be contacted to determine whether or not Bonnie Lake should be included in such an ordinance. A description of the implementation proposals follow.

***Watercraft Limits*** stated above, the lakes within the Bonnie Lake Area are all relatively small and shallow and not suitable for large watercraft or watercraft

---

<sup>3</sup> Note: Due to the diversity of lakes in the Borough and the many requests for lake management plans and guidelines that have been received, a Borough-wide ordinance consisting of a general provisions section containing rules for all lakes, e.g., don't litter and a more specific provisions section containing several lake categories with different guidelines ranging from none to several is being considered.

with large motors. Residents living adjacent to the lake seek to have their shorelines protected from erosion caused by large wakes. Grebes and other bird life nesting on a small lake are placed at an increased risk of disturbance from wakes caused by watercraft with large horsepower engines or by use creating repetitive wake action. The historical use of Ravine and Upper Bonnie Lakes have been low impact recreational; residents and property owners wish to continue this character. Therefore, a ten horsepower motor limitation is recommended for Ravine Lake and Upper Bonnie Lake is limited to electric motor only. The use of personal watercraft, (a.k.a. jetskis, waverunners) is prohibited on all three lakes within the Bonnie Lake Area.

***Loons and Grebes*** To protect loons and grebes it is recommended that a sign (see Appendix #1) be posted on the existing island having an active loon nest. Further, buoys should be placed a minimum of 150 feet (200 feet preferred) around the island to inform lake users of the nest site. Appendix #1 provides information on buoy construction and placement. Finally, a weather-protected informational signboard should be constructed at the preferred access point and information about lake usage and proper behavior near active loon nests, e.g. "Loon (or Grebe) Alert!" The Bonnie Lake Area residents and property owners and Borough should cooperate in implementing the loon and grebe protection program. Additionally, the harassment of loons and grebes and other lake related wildlife such as grebes may become subject to fines under the proposed lake management ordinance described above.

The parcels used for lake access should be supervised on a regular basis to prevent overnight camping, blockage, and unsanitary conditions. A weather-protected information sign should be placed at public access sites to inform the public about the rules regarding the use of the Bonnie Lake Area.

***Public Information*** Information should be posted using the existing information signboard at the public access point informing users to pack out what they pack in and of the adopted management guidelines for the lake. Signs should be erected at access points referring individuals to places where camping is allowed.

***Trash and Fireworks*** Firework displays are illegal without a special permit issued by the Borough Planning Department; never-the-less, individuals generally display fireworks throughout the Borough. Firework displays create two problems, noise from explosions and trash from the fireworks. Firework displays may also start forest fires. The Borough does not have the resources to actively police the illegal use of fireworks and such use is a low priority for the Alaska State Troopers. However, the Borough should advise property owners of the law and inform them to be considerate of their neighbors, avoid polluting the lake with debris, and avoid forest fires and disturbance of waterfowl. Fireworks are prohibited at the State Recreation Area by State Statute.

APPENDIX #1

# SIGN FLOAT FOR LOON NESTS

(NOT LIKELY TO TURN OVER  
IN THE STRONGEST WIND)

## AERIAL VIEW

## VIEW FROM WATER

## NEST

## MATERIALS LIST

- 3 - 1"x 4"x 30" WHITE PINE OR NO. WHITE CEDAR
- 9 - 6d GALV BOX NAILS
- 5 - 1" ROOFING GALV. NAILS
- 1 - LOON SIGN
- 2 - 3 CONCRETE BLOCK \* FOR ANCHORS
- ENOUGH 1/4" NYLON ROPE TO REACH BOTTOM OF LAKE FOR ANCHOR

The platforms should be attached with two anchors a minimum of 150 feet from the nest (more, if needed to avoid disturbing the loons) and be clearly visible, yet not be a boating hazard. Signs should be removed after nesting is completed (usually by mid-July) each year to preserve their use. Signs should be stored over the winter in a dry area.

# LOON ALERT

**Help keep this lake safe  
for loons and other wildlife:**

1. Watch loons from a distance.
2. Pick up fishing line and other litter that may entangle loons.
3. Keep your dog on a leash.

Breeding loons have declined or disappeared from other U.S. states due to human disturbance and habitat loss. Wildlife harassment is illegal. Please report violations to Fish and Wildlife Protection (State Troopers) or call (800) 478-3377. For loon information write: Alaska Department of Fish and Game, Division of Wildlife Conservation, 333 Raspberry Road, Anchorage, AK 99518.

# STEER CLEAR!

**BOATERS – Stay at least 100 feet away  
from nesting Red-necked Grebes.**

Grebes are duck-sized birds that nest on floating vegetation and debris in shallow water.

Wakes from watercraft will destroy their nests and kill their eggs and chicks.

Go slowly along shorelines and avoid nesting areas.

**– HELP PROTECT ALASKA'S WILDLIFE –**

Wildlife harassment is illegal. Report violations to Fish and Wildlife Protection (State Troopers) or call (800) 478-3377.

This sign was produced by a grant to the Alaska Watchable Wildlife Trust Fund, c/o Alaska Conservation Foundation, 430 W. 7th Avenue #215, Anchorage AK 99501 (907) 276-1917.
